TOOLS & TECHNOLOGIES

Data Analysis & Visualization

- Power BI (DAX, Power Query, data modeling)
- Microsoft Excel (Intermediate)
- Data storytelling & dashboard design

Software Development

- Python & JavaScript (Learner)
- HTML & CSS

Databases & ETL

- SQL (T-SQL, queries, stored procederes)
- MySQL / SQL Server
- ETL processes (Extract, Transform, Load)

Other Tools & Skills

- Git / GitHub (basic)
- Networking fundamentals (CCNA Modules I–III)

LANGUAGES

Español – Native
English (writing) – B2+
English (speaking) – B2

PROFILE SUMMARY

Computer Systems Engineering student in the final year of my degree, with strong background in data analysis, SQL and front-end development. Passionate about creating impactful and interactive dashboards with Power BI (including Power Query, DAX and storytelling through data), also skilled in JavaScript and frontend technologies to design intuitive user interfaces (check out my coding projects on GitHub to see my work in action). Seeking my first opportunity as a Junior Data Analyst in an organization where I can apply my knowledge, grow professionally, and contribute to real-world solutions.

PERSONAL PROJECTS

☁ Cloud Workload Performance Analysis

- Interactive Power BI dashboard that analyzes the performance of different scheduling algorithms in cloud computing environments. The project includes dynamic visualizations such as Ribbon Charts, custom KPIs, and advanced filters that allow users to explore key metrics like throughput, error rate, and waiting times. This dashboard takes the user through a 4-page storytelling: Page 1 - Summary | Page 2 Scheduler Performance | Page 3 Resource Efficiency | Page 4 User Load Impact.

🎵 Spotify Streaming Insights

- Interactive dashboard created and inspire in the Onyx Data – DataDNA Challenge using the "Spotify Most Streamed Songs" dataset. Analyzes over 50 top tracks from 2018 to 2023 with KPIs and visuals on streams, release trends, and audio features.
 - Applied skills: Power BI, DAX, data modeling, storytelling interactivity and performance benchmarking.

🚀 Nonprofit Database Management System - Real-World Project

Built a real-world SQL Server database for a nonprofit to centralize data as part of my TCU (University Communal Work) project during the third quarter of 2025.

Key Responsibilities:

- Conducted data gathering and requirement analysis to define the database structure and key business processes.
- Designed the ER diagram and logical data model for the foundation's information system.
- Built the Database: table structure creation | views | stored procedures | scalar functions | business logic triggers
- Configured the ODBC-DNS connection between Access and SQL Server to enable seamless system integration.
- Currently developing the Access front-end, creating forms and reports for user friendly interaction (including VBA logic to interact with SQL Server)

EDUCATION

UNIVERSIDAD LATINA | 2020 - PRESENT (IN PROGRESS)

- Bachelor's Degree in Computer Systems Engineering

LICEO RURAL PACAYITAS | 2012 - 2017

- High School Diploma

CERTIFICATIONS

UDEMY INC. | 2025

- Power BI Total - Advanced Data Analyst

CISCO NETWORKING ACADEMY | 2023 - 2024

- Cisco Certified Network Associate (CCNA)
Modules I, II & III completed

CERTIPROF | 2023

- Business Intelligence Foundation Professional Certification (BIFPC)
